PROFESSIONAL EXPERIENCE

Business Intelligence Officer · AIBI Ltd. Oct 2025 – Present

- Developed and optimized SQL queries, Power BI and Metabase dashboards to analyze large-scale MT4/MT5 trading data, delivering actionable insights for trading operations, business performance, and specific platform abuse.
- Built reports using Power BI and Metabase using trading data from MT4/MT5 and Tradelocker, provided analysis for profit & loss, user trading activities, summary on commissions, swaps, and lots.
- Performed quality assurance tests on newly built and developing dashboards and reconciliation for user equity/balance and trading activities that ensured utmost quality for published reports.

Business Analyst · Greenergy Development Corp. July 2024 – July 2025

- Utilized JavaScript with Google Apps Script to build a tracking and approval system with the use of Gmail API; automated 6 ISO-related procedures across the finance and procurement department, resulting in improved workflow efficiency
- Designed a data retrieval algorithm and developed dashboards in Google Sheets and **Tableau** that allowed the top management to monitor **KPIs** and **KRAs** of each department which resulted in **20%** faster completion of deliverables

ACADEMIC BACKGROUND

Bachelor of Science in Data Science Cum Laude
University of Science and Technology of Southern Philippines

CFA Investment Foundations
CFA Institute

TECHNICAL TOOLS

Programming Languages	Python, SQL, JavaScript
Business Intelligence Tools	Tableau, Power BI, Metabase

PROJECTS

Data visualization of PH REITs using Tableau for financials & operational performance tracking

- Gathered the data from tradingview, investing(dot)com and the company investor relations annual report and stored it in Google Sheets
- Utilized Tableau to design a dashboard for tracking both annual and quarterly revenue, dividend payments, EBITDA margin, GLA and other key REIT metrics.

Optimizing U.T.I Diagnosis with Machine Learning for Reducing Misdiagnoses

- Designed the objectives, methodology pipeline and system architecture of the study
- Designed a custom data retrieval algorithm to extract and load the required data from various sources
- Implemented hyperparameter tuning using Optuna framework and built a hybrid voting ensemble model with optimal hyperparameters
- Designed a data validation pipeline and integrated a MySQL database to the web application
